#### BATS

Two bats were seen during 1973, as follows:-

One small, unidentified bat was flying in Millcombe at dusk on 30th May. Noctule Bat (*Nyctalus noctula*). One flying between Battlements and Landing Beach for at least an hour during afternoon of 25th October.

#### CETACEA and SHARKS

Daily records were maintained of all reported sightings of cetacea and sharks. There are considerable identification difficulties with these groups and so unidentified records are listed with the specific ones.

#### CETACEA

Dolphin sp. A school of c50 off North End on 1st June were probably Common Dolphins (*Delphinus delphis*).

Risso's Dolphin (*Grampus griseus*). Two close inshore off Puffin Gully on 25th June.

Common Porpoise (*Phocaena phocaena*). One off North End on 25th June, one off North End on 15th July, and one found washed up freshly dead at Gannet's Rock on 29th October.

#### SHARKS

Basking Sharks (*Cetorhinus maximus*). Recorded daily from 11th to 18th July, mostly 1-2 but five on 16th, then three on 24th July, one on 11th August and one on 28th September. Usually basking off East Side, but sometimes around South End, once off Battery Point and once in Jenny's Cove.

Shark sp. Small sharks (4-6 feet), most probably Blue Sharks (*Carcharias glaucus*), seen as follows:—one in Landing Bay on 1st July, two off North End on 13th July and two there again on 16th July.
