Plate 2: *Psylliodes luridipennis* on Lundy Cabbage, July 1993. This beetle lives on Lundy Cabbage and occurs nowhere else in the World (Photo: R. S. Key). From list of other invertebrate records.

Lundy Marine Nature Reserve

Proposed zoning scheme

| AREA | RESERVE ZONE | RESTORATION ZONE | PROTECTIVE ZONE | NON-TIDAL ZONE | RESTORATION ZONE |
|----------------|--------------|------------------|-----------------|----------------|------------------|
| Redoubt Point | 1 | 1 | 1 | 1 | 1 |
| Lundy Point | 1 | 1 | 1 | 1 | 1 |
| Rest of Island | 1 | 1 | 1 | 1 | 1 |

RESTORATION ZONE
This zone is intended to protect and restore the natural environment of the island. It covers the majority of the island's land area and is subject to strict controls on development and land use. The zone is divided into several sub-zones, each with its own specific objectives and management plans.

PROTECTIVE ZONE
This zone is intended to protect the island's natural environment from external threats. It covers the coastline and the surrounding waters. The zone is subject to strict controls on activities that could damage the environment, such as fishing and boating.

NON-TIDAL ZONE
This zone is intended to protect the island's natural environment from the effects of sea-level rise and coastal erosion. It covers the low-lying areas of the island and is subject to strict controls on development and land use.

RESTORATION ZONE
This zone is intended to protect and restore the natural environment of the island. It covers the majority of the island's land area and is subject to strict controls on development and land use. The zone is divided into several sub-zones, each with its own specific objectives and management plans.

English Nature is the body responsible for the Marine Nature Reserve. For more information, visit our website at www.english-nature.gov.uk.
