

Plate 1: A 3D image of the topography of Lundy's seabed, the result of a mapping survey undertaken in 1996. This accompanies the paper by Gilliland.

Plate 2: Beacon Hill Cemetery: slate gravestone dated 1892 showing, near the top, large colonies of the crustose lichens, *Lecanora rupicola* and *Tephromela atra*. These lichens are over 100 years old and can be used to estimate their growth rate. (Photo: Barbara Hilton). This accompanies the paper by James, Allen and Hilton.
